Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Chohan (U.S. 2004/0120362 A1).

3. Regarding claim 1, Chohan teaches (fig. 1) a method of provisioning a circuit comprising the steps of: provisioning an Ethernet port facility, including determining members of a LCAS VCG before virtual tributary or synchronous transport signal cross connections are provisioned (paragraphs 39-40) and before SONET or SDH cross-connections are provisioned (paragraph 24); provisioning virtual tributary or synchronous transport signal cross connections paragraph 41); and provisioning Synchronous Optical Network or Synchronous Digital Hierarchy cross-connections paragraph 24).

4. Regarding claims 2 and 6, Chohan teaches (fig. 1) provisioning the Ethernet port facility so that VCG members that are not associated with a virtual tributary or synchronous transport signal cross connection return an LCAS sink status of FAIL and Virtual Concatenation Group

members that are not associated with a virtual tributary or synchronous transport signal cross 8 connection enter an operational LCAS source state of "Do Not Use" (paragraphs 39-41).

5. Regarding claims 3 and 7, Chohan teaches (paragraph 39) using LCAS source and sink adaptation functions, automatically activating the Virtual Concatenation Group members.

6. Regarding claims 4 and 8, Chohan teaches (paragraph 39) causing the VCG members to have an LCAS sink status of OK and an operational LCAS source state of NORM or EOS.

7. Regarding claim 5, Chohan teaches (fig. 1) a system for provisioning a circuit comprising: means for provisioning an Ethernet port facility, including determining members of a LCAS VCG before virtual tributary or synchronous transport signal cross connections are provisioned (paragraphs 39-40) and before SONET or SDH cross-connections are provisioned (paragraphs 24); means for provisioning virtual tributary or synchronous transport signal cross connections (paragraphs 41); and means for provisioning SONET or SDH cross-connections (paragraphs 24).
